

Everybody Has a Sound

By Sharry Edwards, M.Ed.

Imagine a world in which we can be individually identified, manipulated and managed through the use of frequency-based biomarkers that can easily be obtained through our vocal animations/sounds.

A CASE IN POINT:

At a recent international medical conference (A4M) a BioAcoustic case study concerning Russ Rudy, MD, was presented. Rudy had been diagnosed with Multiple Sclerosis (MS), resulting in serious leg muscle atrophy and neuropathy. Rudy was informed that his situation was dire, incurable and nothing more medically could be done for him; he was sent home to die with a Baclofen pump internally installed to help control the pain. Instead of accepting the death sentence, Dr. Rudy visited the Institute of BioAcoustic Biology & Sound Health in Albany, Ohio, where voice analysis has been explored since 1984, as a diagnostic tool for health issues past, present, and future.

A computerized evaluation of Rudy's vocal expressions identified math-based biomarkers, which indicated spinal damage architectures within Rudy's vocals sounds; and further indicated that no MS markers were present.

Rudy denied any such trauma, but a few days later remembered a skiing accident 20 years prior, which confirmed the computer identified spinal injury.

Specific ambient sound combinations designed to entrain the brain to return the body to normal form and function were provided to Rudy, based on the individual properties of his voice.

Over the next few weeks, lab reports confirmed that nerve recruitment was taking place from Rudy's waist to his toes. This is totally impossible by standard medical practice. The Baclofen pump

was removed (usually done at autopsy), his legs now supported him, and he no longer needed a scooter to move about.

Rudy was able to return to his medical practice as an emergency room physician. To this day, he believes that his erroneous MS diagnosis would have condemned him to a shortened, inferior quality of life. He is incredibly happy that using the frequencies of his voice as a guide, the computer was able to reveal the definitive mathematical cause for his lack of wellness.

Over the last few decades, data collection by the Institute of BioAcoustic Biology has successfully provided the proof that persons who experience parallel issues (traumas, diseases, genetic issues, immunosuppression, psychological stresses, toxins, pathogens...) have similar, if not identical, anomalous vocal mathematical patterns; frequency relationships that could be considered akin to a "sour" note in a song.

MATHEMATIC EQUATIONS

Math as Medicine has proven its worth in countless situations and is based on the theory that the brain communicates using the language of Frequency EquivalentTM - numeric representations of people, places, or things.

Studies show that this protocol provides the opportunity to reveal individual health-related numeric templates, which have the potential to promote and extend life.

Over decades, hundreds of numeric patterns of the voice have been decoded by acknowledged Human BioAcoustic, pioneer, researcher, Sharry Edwards and her dedicated crew at the Institute located in Southeastern Ohio.

Well beyond the idea of conventional biochemical pathways, Edwards has rediscovered what our ancestors knew about the magic of numbers as a basis for life and living.

Just as there are established Pathways of compounds called Chemistry; there are Mathways of subtractive frequencies, that some call Sonistry, which can be used to create frequency-based biomarkers capable, individually and collectively, of being predictive, diagnostic and prescriptive for issues related to optimal form and function. Frequency is the basis of our universe. We measure it, study it, quantify it, and use it to understand ourselves, our environment, our biochemistry, and our behaviors. But what if there were more to our origins? What if Frequency (the measurement of Vibration and Frequency), the basis of everything, is more than synthetic equations; what if math is organic? If so, could we be considered math-based life forms?

Consider the brain as the central processing unit. Frequency-based signals are generated and have been determined to be a communication pathway traveling along our neural networks that self-monitor and keep our bodies in stasis.

Frequency can be represented in terms of mathematical equations. Does this fact indicate that math could be a form of healing? If math can be proven to be a form of healing, does this indicate that math may be organic or that we may just be sophisticated art forms that someone/something created using mathematical algorithms? Can Math be used as Medicine? Edwards is well on her way to proving that at our core we are very sophisticated math-based robots. She states that we can be "managed" through our individual frequency/energy-based Signatures.

Her work at the Institute of BioAcoustic Biology has shown that we can each have dominion over those frequencies by individual mind management or by a simple remote control that is completely programmable. Using the unique techniques of Vocal Profiling and evaluation,

anomalous emotional, as well as physiological issues, can be revealed and resolved.

Studies show that the human voice can substantiate the fact that people who share similar vocal architectures, share similar health personality issues; these Signature Sounds were known to our ancestor. The data brings together ancient knowledge with modern ideas of harmonics and frequency relationships to show that math can be used as forms of predictive, diagnostic and curative foundations for wellness.

ENTRAINMENT

Through entrainment of the frequency grids of the brain, the body can be programmed to support its own optimal form and function. The essential element is accurately identifying the appropriate/significant frequencies associated with each individual. String theory proposes that infinitesimally small strings create our bodily structures but it doesn't answer the question of how this transformation occurs. The brain communicates using the language of frequency and has the ability to reveal individual DNA/RNA templates that have the potential to promote and extend life. Edwards' work provides many of these answers as to how these theories can be put to use to bring the Truth to the surface about who we are, how we got here, and where we are going in terms of our intentions and health.

Is frequency our new medicine or an ancient mystery revealed? There have only been a few modern keepers of the Holy Grail mysteries. Sharry Edwards has been identified as one of the extraordinary beings walking the earth to bring forth the secrets kept from mankind.

Her work has helped identify the hidden Codes of Life that add meaning and new dimensions to our existence. She will likely be best known for her ability to bridge the gap between the ancient, the esoteric, and the scientific realms of human evolution.

Her ability to hear the sounds of a space is astonishing. To walk with her into a room, watch

her tilt her head and then sing a vocal pure-tone (supposedly impossible for a human) that causes the room to echo back is a skin-tingling experience. She can also sing the sounds of nearly any vessel, a person, a thought, a compound, or an animal. Even though she has now crossed the bridges of 7+ decades, she is still discovering unique qualities about her voice and ears.

MATHEMATICALLY MANAGED & FREQUENCY-BASED SIGNATURE SOUNDS

She laughs as she explains that she was disinvited to a sound healing conference by an organizer stating that she has no musical talent— doesn't play any instrument. However, Sharry's unusual vocal abilities are likely one of the most unique musical voices on the planet. She cites her ability to "hear" the signature sound of almost anything as the reason that she is able to tap into the hidden nature of the universe via numbers.

Edwards believes that her work is well on the way to providing the proof that, at our core, we are very sophisticated, but mathematically managed, frequency-based robots.

She asks that we imagine a future in which we can be individually identified and maintained through our math matrix to permanently establish and maintain ourselves as healthy and emotionally balanced. Her work at the Institute of BioAcoustic Biology has shown that we can each have dominion over those frequencies by individual mind management, or a simple remote control that is completely programmable.

In the near future biofrequencies, as an indicator of health, will become as common as taking your temperature or blood pressure, when you visit your health care provider. MIT, several universities, and the Mayo Clinic are working with these principles; with AT&T declaring that "bioacoustics is the medicine of the future." This ancient idea of Signature Sounds combined with modern techniques of Vocal Profiling utilize the premise that the body can identify and prescribe for itself using the algorithms of vocalized

frequencies to accurately quantify, organize, and extrapolate biometric information.

She brings together ancient knowledge with modern ideas of harmonics and frequency relationship theories to show that math can be used as a form of predictive, diagnostic, and curative foundation for wellness. Through entrainment of the frequency grids of the brain, the body can be programmed to support its own optimal form and function.

RESPONSIBILITY IN HEALTH CARE

Edwards explains that her research supports the idea of Health for THE PEOPLE, by THE PEOPLE is making room for self-responsibility in health care. Dissatisfaction in the present systems leads to a demand for change but we also realize there are obstacles to change. Edwards has created an open to the public web site that provides information and software as Tools & Solutions for Vocal Profiling that promote SELF-HEALTH.

Sharry Edwards, MEd

No one argues that our present health care system is in crisis or that people are seeking alternatives. Buckminster Fuller said "In order to change something, don't struggle to change the existing

model. Create a new model and make the old one obsolete." Edwards, with her small, yet highly innovative educational, research facility, is striving to do just that.

Edwards has created a BioAcoustic-based alternative Health Care System, she intends to share it with THE PEOPLE and leave those who insist they know what's best for us, in our dust.

VOCAL PROFILING

Vocal Profiling has the ability to let us know the intentions of our leaders; the motivations of our partners; the foundation of our sense of Self-Health and wellbeing. Would those abilities be of value in the struggle to attain dominion over our intrinsic right to personal freedoms?

From birth to death, we use sounds to express our needs and emotions, but there are additional layers of information hidden within the words. In modern times we possess only limited conscious awareness of this information for ourselves or as a means to interpret the intentions of others.

Vocal Profiling software has been developed that can use the components of the voice to create a matrix of information about anyone, from fundamental DNA, to the hidden intentions of those who claim to speak for us.

Sharry Edwards has been accused of being too scientific by some, too esoteric by others. In actuality, she is a bridge between both fields of inquiry.

Sharry is the acknowledged pioneer in the emerging field of Human BioAcoustic Vocal Profiling. She has for many years provided the leading-edge research to show the voice as a holographic representation of the body that can be used to change the face of medicine.

Sharry's intention to demonstrate how the present system of health and governmental tyranny is both a tragedy and an opportunity. Our brain is a central processing unit of our body that

initiates and circulates frequencies throughout our vast neural networks; providing directives and power to keep our bodies in exacting homeostasis (healthy balance).

This indicates that even unspoken, thought can become our guiding force in keeping us healthy, emotionally balanced or potentially controlled through electronic means.

We are on the precipice of learning to use the individual sounds exhibited by the body as intrinsic, individual healing directives. Edwards has opened the door to possibility. For centuries curious minds have attempted to compare sounds, light, emotions, disease states... with the health and maladies of the human condition.

Finding your own voice takes on new meaning if you begin to consider the possibility that the sounds of your voice may be a holographic representation of all that you are.

From birth to death, we use sounds to express our needs and emotions but there are additional layers of information hidden within our words. As man evolved, language became levels of intricate harmony nestled within structures of great elegance that carried meaning and allowed understanding of ourselves and others.

Everything that happens to the body reaches the brain as biofrequencies that are then sorted, routed, and assigned an interpretation. But. it seems in modern times we carry very little conscious awareness of this information.

Did we as a human race forget, or were we forced to abandon, a great deal of our intrinsic abilities to glean information about another person simply by hearing their voice?

NUMERIC CODES & VOCAL PROFILING

Down through the generations, the idea that humans are fostered and driven by ancient numeric codes has intrigued many scientists and visionaries. The popularity of publications such as

"The Da Vinci Code and The Symbol" by Dan Brown, has sparked interest in the possibility that a great deal of knowledge has been kept hidden from all but the elite of humankind. Is the idea that we have dominion over our lives through our thoughts and intentions; an intrinsic fact of human spirit? Can we in truth chant the words and create our Reality?

The obvious success of the tide-turning movie, "The Secret," showed that people are ready to accept the fact that we can think or say something and have it manifest. Have we matured enough to receive the bounty of consciousness-produced reality with wisdom? Do people really know what they want, deep down, devoid of old parental "tapes," advertising, peer pressure, the "oughts" and "shoulds" that we are subjected to daily?

If we want to manifest our neighbor's car or wife for ourselves is this a lack of respect or our basic right of conscious intention? If we accept the reality that we all fit, perfectly into the perfectly conceived, perfectly interlocking puzzle of life, then how can we Someone would do without and therein resides a basic problem. If we both pray for the same thing, who gets the prize? So how can someone 'program' their lives with the voice of prayer and mantra without bumping into the needs and rights of others?

Many spiritual leaders, though-out the ages, have claimed that we have the power to be who we want to be, to have what we want. Could it be that the world is designed perfectly and if we really knew the ideal life to manifest, then everything would be in harmony. But how can we ever know what will perfectly balance our lives? How can we know what we really want underneath the layers of greed and need?

We can find our true voice. Nothing is hidden from your own voice. You may be able to lie to your friends and deceive yourself with your words but the voice does not lie. Vocal Profiling computer software has been built that can evaluate the frequencies, architectures, and harmonics of your voice. Vast frequency-based databanks can now

be used to create a report of what you really think, who you are emotionally and the status of your health. The frequencies missing from your voice are just as important as those that are present. An entire matrix of information, from your DNA to your partner preferences can be evaluated.

Using this modality, your voice can be used to reveal who you really are under the layer of public personality you have created. This is an opportunity of the human race to break free of all of the deceit and deception that we live with on a daily basis.

What would our world be like? Our legal system would be unneeded if your true voice could be so easily read. Unsound relationships would crumble, businesses would fall because, for the most part, our world is built on what we can keep hidden from those who think they know us.

Vocal Profiling has the ability to let us know the intentions of our leaders, the motivations of our partners, the pathway to our sense of self, and breaking the sounds barriers of disease. Would that be of value or an avenue toward destruction?

What would the world be like if everyone only spoke the TRUTH? Can you image a society where we are all known by our frequency signatures that people could read through a voice that truly represented who we are?

That physical and emotional injuries can be healed. Could finding our true voice allow us to create a world full of grace, dignity, and a sense of wellbeing?

We loudly proclaim that truth should be valued as a virtue. Should it have taken a computer program with "Signature Sounds" for us to discover our internal truth and clarity?
