Color association: Gold

Was God a Mathematician? Exploring Math as Medicine

In order to provide predictability and safety, the concepts of math and medicine often act conjointly to quantify, define and model medical practice. Studies conducted by the non-profit Institute of BioAcoustic Biology & Sound Health, located in Albany, Ohio, USA, have consistently demonstrated that math can be much more than a measurement tool. The case studies they have amassed, using Math as frequency-based BioMarkers, indicate that the solution to therapeutic predictability and resolution may be possible.

The Institute posted their first frequency-based article about potential covid damages in December 2019. Since then, they have evaluated 1000s of frequency-based vocal prints. It took nearly three years for the conventional options to catch up with even a few of their conclusions. Continuing updates and information can be found at:
<https://soundhealthoptions.com/corona-corner-2/>

Last month this column reported the findings of a 99-million-person survey of covid vaccinated individuals that predicted future damages. The report provided bad news with no options for the threat of worldwide depopulation through covid-caused deaths. PubMed:
<https://pubmed.ncbi.nlm.nih.gov/38350768/>

The survey reported upcoming damages, without any means of remediation concerning those who have been violated as a result of the covid pandemic. This month this column would like to provide potential tools and solutions to help ameliorate the forecasted health devastation.

Possible BioAcoustic Tools & Solutions

1. The 99-million survey reported heart, vascular breakdown, and circulation faults as significant. These issues can be vocally screened using the template Subsequent Factors – BioBundles - at www.SoundHealthPortal.com. The public online screening uses a compilation of 14 databases to mathematically identify individual issues. The computerized reports are designed to be reviewed by a person's wellness provider.
2. Mathematics-based issues associated with thrombin, blood clotting, iron, blood homeostasis, zinc, Protein C, niacin and aminolevulinic acid were common within the vocal evaluations for those suffering clotting concerns associated with vaccine damage. These are also factors that can be used to mathematically discern potential, individual covid damages via SoundHealthPortal.com.
3. Macular Degeneration seems to be among the damages listed for those who have been vaccinated. Vocal survey compilations from the Institute of BioAcoustic Biology & Sound Health indicate that frequency faults dealing with the Rectus eye muscles and the amino acid, carnitine, were helpful in reversing macular degeneration factors.
4. Immune issues show to be strongly related to covid damage. Glutathione was obviously involved. Mike Adams, the Health Ranger, strongly recommends that glutathione not be taken supplementally but the body should be left to make its own by combining NAC (acetylcysteine) and bromelain to support a strong immune response. For additional information <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7999995/>
5. Dr. Ana Mihalcea has reported that lipid metabolism has a great deal to do with the pollution of blood from unreported nano components found in Covid vaccines. This claim indicates that

efficient lipid metabolism is essential to competent immune function. Based on these findings, a template has been created that can allow individuals to mathematically evaluate themselves against lipid faults. Go to SoundHealthPortal.com – Choose Lipid Liabilities template for more information.

6. Many Covid-damaged people report fatigue and muscle pain. BioAcoustically Speaking, Fibromyalgia pain responds to increased cellular oxygen, pyruvate activation and lactic acid elimination. Fatigue and fibromyalgia can be monitored mathematically through the Sound Health Portal which is open to the public at no cost. NAD (nicotinamide adenine dinucleotide) is often found lacking in Covid-damaged individuals. NAD supports mitochondrial energy, enzyme activity, cell signaling, circulation and cellular functioning.
7. Iron and blood formation play an important role in fatigue and energy metabolism. Issues of iron, inflammation and blood metabolism can also be mathematically evaluated via the Sound Health Portal.
8. Disturbances in the God Gene seem to play an important part in Covid damage. This gene proposed by geneticist, Dean Hamer, is actually a biochemical that hardwires our brain for faith and empathy determinants. This “gene” is associated with dopamine, serotonin and bonding biochemicals. It is included in many covid assessment templates offered at SoundHealthPortal.com. This may explain why many covid-vaccinated individuals complain of feeling a loss of connection to God, their community, and friends.
9. Quercetin frequencies were one of the original covid rivals that Sound Health reported in 2019. Quercetin is a bioflavonoid associated with immune and inflammation responses. In addition, quercetin from food sources, such as onion, was shown to have positive effects on platelet aggregation.

10. Respiratory Failure has been reported as a symptom of Covid damage. James Marshall, actor and composer, created a series of frequencies designed to support the lungs and respiration. Download it free from <https://www.bioacousticsolutions.net/le-ciel> or use the COPD template on the SoundHealthPortal to check for breathing issues.
11. Many Covid-vaccinated individuals report ringing in the ears, tinnitus. BioAcoustic records show that Potassium-, Actin- and Myosin-related frequencies are present in the vocal prints of persons reporting it. It usually takes months to eliminate Tinnitus symptoms. The Sound Health Portal offers Math-based Tinnitus evaluations.

It can be demonstrated that just as there are Pathways of compounds called Chemistry; there are Mathways of subtractive frequencies, dubbed Sonistry, that can be used to create numeric biomarker matrices capable, individually and collectively, of being therapeutically predictive, diagnostic, and prescriptive.

More important than Sound Health bringing you information about math as medicine, we want to bring you tools and solutions in support of optimal health and wellness. Our goal is to help the development of BioAcoustic Centers in every community. To support that goal, we want to provide everyone the opportunity to learn Vocal Profiling skills for themselves, their loved ones, and their communities.

Esoteric Thought: Was the Covid Pandemic situation created to allow us to choose, as a population, what we want to worship: Greed or the good of humanity? Is Covid our modern-day Sodom and Gomorrah?

Frequency correlates for July 2024: Note the many connections to covid damage.

Week one

Blood and circulation issues dominate this week.

Nutrients in stress: niacin – de-clumps “sticky” blood and supports circulation and DNA genetics. Iron continues to be an issue. Vitamin C continues to flare as allergy season fires up.

You may react more emotionally as dopamine, the feel good biochemical, comes into play. Depending on your brain dominance, your relationships may be more or less satisfying/interesting.

Nerve damage may be more noticeable.

Medication in stress: Warfarin – a blood thinner.

Upper back muscles will feel stressed.

Pathogen active currently: Streptococcus pyogenes is a ubiquitous bacterium responsible for hundreds of millions of illnesses, from tooth decay to meningitis, throughout the world each year, some of which are fatal.

Back strain along with adrenal tension are obvious over the 4th.

Week two

Insulin resistance is high this week likely because of fatty liver issues. It will be harder to lose weight as insulin resistance helps to maintain fat storage. Carbohydrate metabolism is hampered because of the stress of enzymes lipase and diastase. Allergies begin to plague now, particularly nose and bronchial issues. Remember the support of Vitamin C may help. Marijuana may have more of an effect this week. Menstrual cramps may be relieved easily with progesterone oil or cream as this hormone is active this week.

Strep still lurks this week. Platelets are vulnerable, B3 (niacin) may help break up sticky blood.

Medication this week deals with high blood pressure. I've tried Nitric Oxide tablets (from Amazon NO₄₀) - they seem to work for me.

Marijuana is still active along with inflammation markers and fatty liver indicators. Calcium and cancer markers begin to rise this week (calcium, calcitonin, and the Burznyski frequencies plus 5 HETE – all CANCER-RELATED.)

Nerve sheathing activates this week – You might want to check out Benfotiamine (said to be great for restless legs due to nerve damage)

Adiponectin rears its ugly head this week – from Wikipedia –

“Adiponectin is a [protein hormone](#) and [adipokine](#) that is involved in regulating [glucose](#) levels as well as [fatty acid](#) breakdown.”

Carnitine helps break down fatty acids but is also in stress this week. The literature indicates that carnitine combined with alpha lipoic acid may help regulate blood glucose.

Week three

The keynote for this week includes the note of E which deals with wet tissues of the body, particularly the nose, mouth, throat and lungs. More mucous may be experienced along with stronger reactions to mucous-producing foods. Deep breathing may be difficult.

Many forms of rhino virus are still lurking.

Muscles: ribs and diaphragm frequencies may be more vulnerable.

Week four

This week is further involved with the amino acid carnitine. People who cannot gain weight have been found to be high in it. It can be found primarily in meats. Vitamins B1, B6, C, iron, methionine, and lysine must be available to the body in support of synthesizing carnitine.

The end of this week is ruled by the lower back; encompassing the sexual “thrust” muscles for men. These are the muscles that cause stress in a golf swing.

The pathogen active for the next few days is helicobacter pylori; and is responsible for stomach lining irritation.

Muscles in stress currently: mostly neck muscles. It is likely not your pillow, it is just that time of year.

A protein that helps the body use leptin (that dreaded fat storage hormone) is high for the next few days. Might not be a good time to start that diet you have been putting off.

Last day of July – spike proteins are predicted to become more active next month.

We have often said that, BioAcoustically Speaking, almost everything is something else. By that we mean that one frequency can represent many things. This week's Keynote is a great example of this. The frequency of Marijuana, a medicinal herb, is the same frequency as a natural hormone, Progesterone, which varies significantly with the human reproduction cycle. This may be why some false positives show up during drug testing. Progesterone is found in both males and females. Low Progesterone has the same symptoms as coming down from a marijuana high, you experience the munchies.

Progesterone is necessary to produce sex hormones, to maintain pregnancy, as a support for brain function and a regulator of libido. The tenets of BioAcoustic Biology have stated for nearly two decades that frequency relationships can explain the connections between many diseases. For example, BioAcoustics can now show the root cause of the connection between heart disease and cranky knees – the frequency of the heart muscle and knee muscles are the same – so when knees get weak, it is likely that heart muscle is also stressed. Conventional science may know these relationships exist but cannot explain why.

Sensitive persons may experience reactions a few days before the date of actual activation.

With an understanding of frequency antidotes, not much can be thrown at us that we cannot counter. The concepts of Math as Medicine may help scientists take a leap forward toward understanding how disease can be predicted and treated.

Please consider attending our online tutorials and classes to learn to protect you and your loved ones –
